Carousel Best Practices

When adding images into the carousel widget, we recommend making all of the photos the **same relative height and width.**

For example, if the first carousel photo is 1200 pixels wide by 200 pixels tall, each of your other images should be the same aspect ratio (width/height ratio), e.g. 600 x 100, 900 x 150, 2400 x 400. This ensures all of the photos will show at the same size within the area they are kept in.

As a recommendation, we use an image size of **1600 pixels wide x 400 pixels tall** when setting up new carousels.
