Best Practices: Carousel Widget

Michael C. - 2023-01-12 - Website Widgets

Carousel Best Practices

When adding images into the carousel widget, we recommend making all of the photos the **same relative height and width.**

For example, if the first carousel photo is 1200 pixels wide by 200 pixels tall, each of your other images should be the same aspect ratio (width/height ratio), e.g. 600×100 , 900×150 , 2400×400 . This ensures all of the photos will show at the same size within the area they are kept in.

As a recommendation, we use an image size of 1600 pixels wide x 400 pixels tall when setting up new carousels.
